CYNOSURE

Excessive Sweating

Lessen the stress and worry you have about your bothersome sweating with PrecisionTx for Axillary Gland ablation.

Take the next step to making every day the one you want. PrecisionTx delivers laser energy under the skin to ablate and coagulate soft tissue, including the Axillary Glands under the arm. This one time treatment offers minimal downtime and has delivered results with high patient satisfaction.

How does it work?

PrecisionTx is a minimally invasive procedure to treat and ablate tissue in areas such as under the arms. Through a small incision a very thin tube containing the PrecisionTx laser fiber is inserted and delivers thermal energy directly to the treatment area.

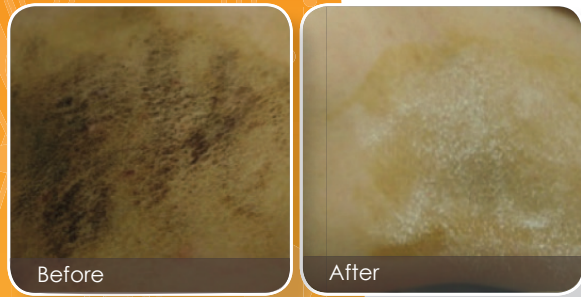

What results can I expect?

For most people, results are achieved in just one treatment. Speak with your physician about what you can expect post-treatment.

Treatment plans can be adjusted to fit everyone's lifestyle – speak to your provider regarding desired downtime, comfort, and results.*

Schedule your treatment session today.

*Individual results may vary and are not guaranteed.
