

TREAT ACNE, SCARS, WRINKLES, STRETCH MARKS...

COSMOPen® is a state-of-the-art medical grade high speed micro-needling System. It offers the same results as a fractional laser without pain, downtime, expense, and thermal damage.

COSMOPen® can be used to treat acne and surgical scars—including keloids—as well as wrinkles, stretch marks, pore size, and signs of aging.

Additionally, by vertically piercing the skin, **COSMOPen®** helps naturally induce collagen production and treat pigmentation.

What can the **CosmoPen** treat?

Most useful for:

- Facial rejuvenation, restoring skin elasticity, production of new collagen.
- Improving acne scars and keloids.
- Reducing fine lines and deep expression lines.
- Treating stretch marks.
- Decreasing hyperpigmentation and melasma.
- Treating alopecia.
- Improving the delivery of nutrients through the skin.

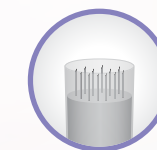

Stretch Marks, Fine Wrinkles, Keloid & Surgery Scars.

The New Standard in MicroNeedling Technology

Frequently Asked Questions

How does it work?

CosmoPen microneedling is designed to stimulate your skin's natural ability to produce new collagen, bringing about healthier skin. The "micro-channels" created by applying the CosmoPen device over your skin also allow specific topical solutions to penetrate into the deeper layers of the skin for optimal rejuvenating results.

What areas of the body can be treated, am I a candidate?

CosmoPen can be used on all skin types and is a valuable tool to treat a variety of skin concerns such as: facial rejuvenation, scarring (acne, surgical), stretch marks, pigmentation disorders and alopecia.

What will the treatment feel like and how long is the downtime?

In most cases, a topical anesthetic is applied to the skin prior to CosmoPen® treatment to reduce discomfort and minimize pain. The downtime is minimal, however you may experience redness for 12 to 48 hours afterward. You will not incur any major side effects and you can resume your normal activities immediately after treatment.

When will I start seeing results?

Usually you will notice some improvement after the first treatment. More significant results will start occurring after 2 to 3 treatments spaced 1-2 weeks apart. Collagen production takes place over time. Skin will continue to improve over the next 6 to 12 months post CosmoPen treatments with proper skin care regimen. Results will vary for each patient.

Can I combine CosmoPen treatment with filler or botox injections?

It's recommended to wait at least 4 days after filler/botox injections so that any post treatment bruising from those procedures can settle*.

Or have your CosmoPen treatment 1 or 2 days before having fillers injected.

**However, filler injections performed with Dermasculpt Microcannulas will greatly reduce the chance of bruising.*

Patients' Testimonials

“I was surprised by the minimum amount of pain. I thought I was going to be much redder after the treatment but I'm not and it only feels like I got a sunburn! I would definitely recommend this to everybody!”

Andrea- treated for hyperpigmentation from sun damage

“The microneedling has helped to get rid of fine lines, even my skin tone and my pores are smaller. I feel I have a much more youthful-looking skin! The treatment is worth it!”

Joni- treated for skin rejuvenation and anti-aging

“I recommend microneedling to anyone looking for benefits like I was: diminishing acne scars, brown spots and for general anti-aging benefits. I've done so many procedures in the past that had so much more downtime. This was great, within 24 hours I was ready to go back to my normal activities.”

Julie- treated for acne scarring and anti-aging
