Removing  
tattoos just  
got faster

Tattoo removal with PicoSure®

 **PicoSure®**

# Ready to lose that tattoo? Do it better and faster with PicoSure.<sup>®</sup>

PicoSure is the world's first picosecond laser and the only advanced tattoo removal laser with PressureWave™ technology, which works *with* your body to remove unwanted ink.

## Selective "shattering" with PressureWave™

PicoSure delivers laser energy that specifically targets tattoo ink, resulting in the successful shattering of just the ink particles without harming the surrounding tissue. **PressureWave is the secret behind tattoo treatments with PicoSure.**

PicoSure works effectively on:

- Multicolored tattoos, including blues and greens
- Hard-to-remove black ink
- Stubborn, previously treated tattoos

**Best of all, PicoSure tattoo removal often requires fewer treatments than traditional laser tattoo removal.**

## How does a PicoSure treatment work?

During treatment with PicoSure, ultra-short (trillionths of a second) pulses target ink particles with PressureWave technology—a pressure so powerful, the ink shatters into tiny dust-like particles. These microscopic particles are more rapidly absorbed and eliminated naturally by the body.

### PressureWave technology in action

*Electron Microscopy Courtesy of H.B. Jalian, MD*

Unlike traditional tattoo lasers, which rely on heat to destroy tattoo ink, PicoSure delivers a photomechanical impact called PressureWave that effectively shatters ink into tiny particles.

*This can mean better clearance of the tattoo and fewer treatments compared to conventional laser tattoo removal.*

## Lose the ink, faster, with PicoSure

- Fast treatment times of typically 10 minutes
- Number of treatments needed is dependent on variables such as ink characteristics, size of tattoo, location on body, and lifestyle habits\*
- Treatments typically occur every 6-8 weeks\*

\* Your treatment provider will develop a treatment plan to meet your individual needs.

Patients and treatment providers have reported better clearance (disappearance) of tattoos with improved recovery time. So you can expect excellent results with PicoSure.

## PressureWave your tattoo away with PicoSure

Let PicoSure work with your body to clear unwanted ink colors, with breakthrough tattoo removal.

PicoSure works *with* your body to remove tattoos—better and in fewer treatments.
